MOTION DNA

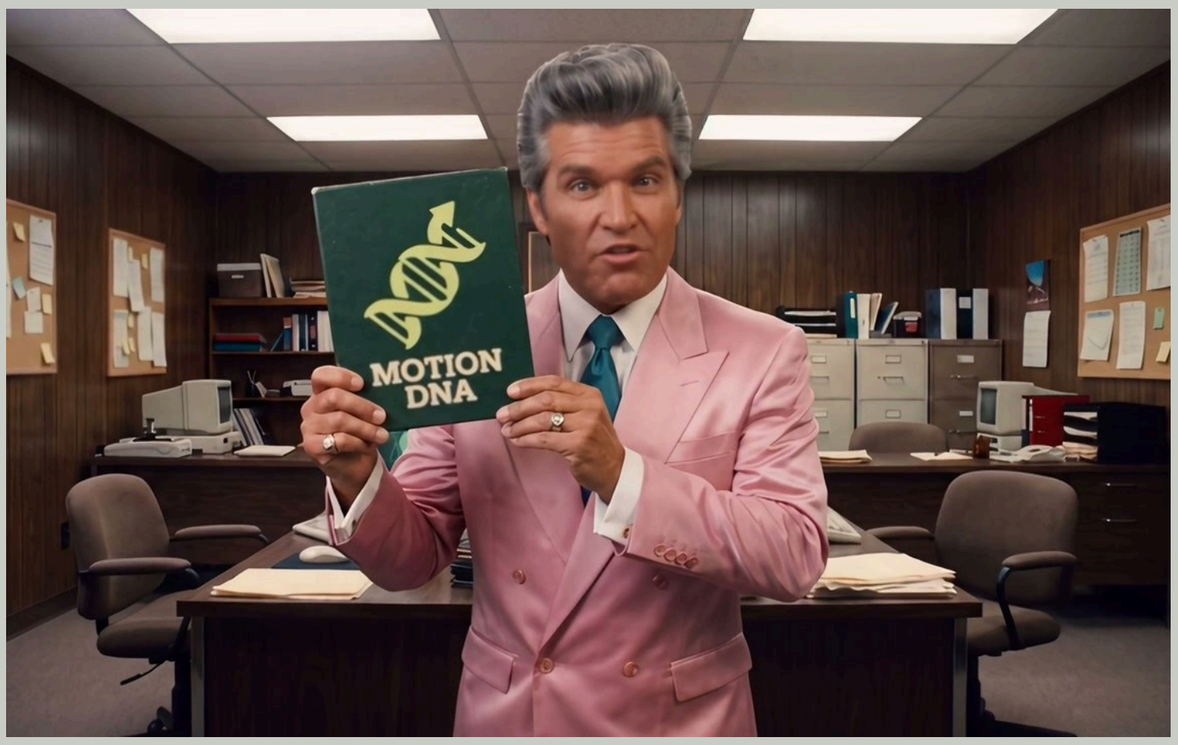

QUICK INSTALL · FOR AFTER EFFECTS

Install Motion DNA *in five minutes.*

Claude installs it for you. Seven steps, one link, no admin rights.

rex_says.txt

“Let me show you how to install Motion DNA. Five minutes, tops!”

— Rex, the motion salesman

`github.com/aaronamortegui-glitch/Motion_library`

7 steps · about 5 minutes

PART 1 · IN THE CLAUDE APP

Claude installs it.

You paste one link.

1 Open Claude › Code

Open the Claude desktop app and pick Code at the top of the sidebar, next to Home. A terminal works too: run claude.

2 New session, in any folder

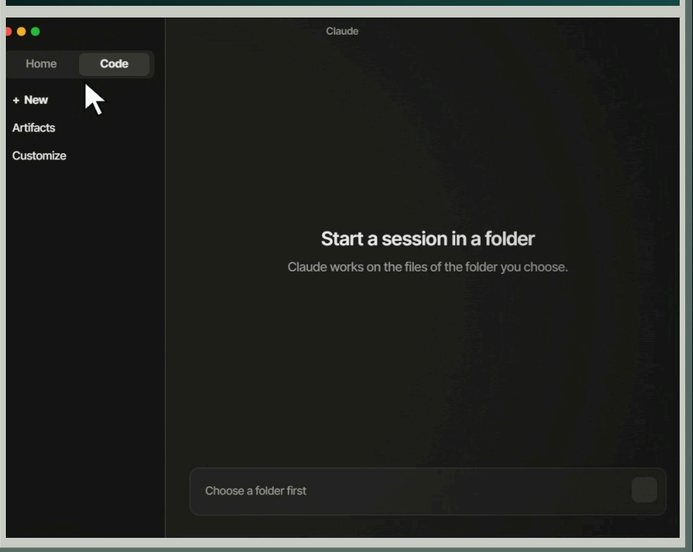

Click + New and choose a folder for your projects, for example Documents › Projects.

3 Paste the repo link

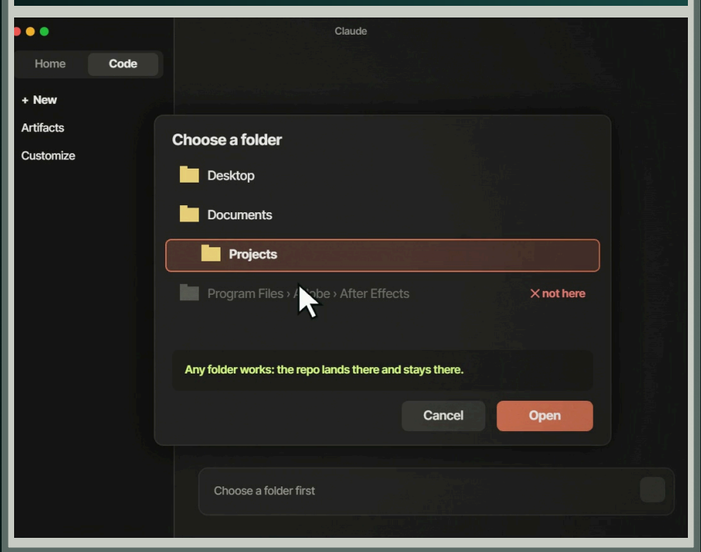

Send this message. Claude clones the repo, runs the setup (signed panel, fonts, the link with Claude) and checks it.

```
Install Motion DNA from https://github.com/aaronamortegui-glitch/Motion_library
```

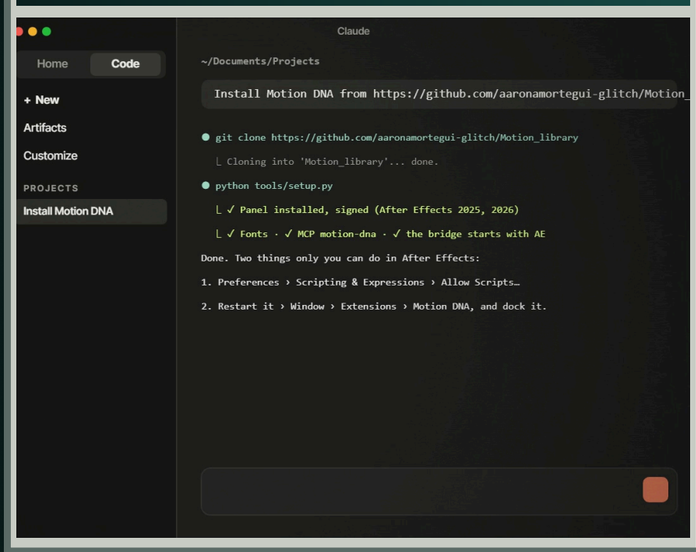

1 · Code at the top

2 · + New › a folder

3 · paste, and it installs

Which folder?

Any folder for your projects. Not the After Effects folder: it belongs to Adobe and may need admin rights. The repo lands in the folder you choose and stays there (the panel reads the library from it). The setup finds every After Effects version on its own.

Claude ends by telling you the two things only you can do in After Effects →

PART 2 · IN AFTER EFFECTS

Two things only you do.
Once, and never again.

4 Allow scripts

After Effects › Preferences › Scripting & Expressions › tick Allow Scripts to Write Files and Access Network.

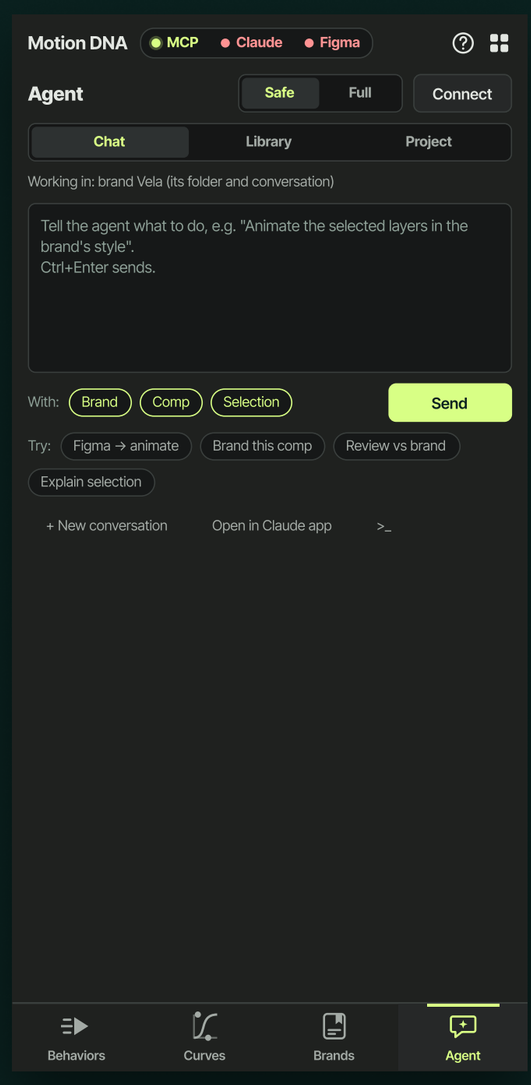

5 Open the panel

Restart After Effects › Window › Extensions › Motion DNA, then dock it: it comes back every time you open After Effects.

```
Window › Extensions › Motion DNA
```

Also in File › Scripts › Motion DNA. The link with Claude starts by itself when After Effects opens.

PART 3 · CONNECT AND ASK

Press Connect.

Allow it in the browser.

6 Connect

With the accounts you already have, each one is a button and an Allow in your browser. The dots turn green by themselves.

- **Claude**
  Panel › Agent › Connect › Connect Claude. Sign in once.
- **Figma**
  Connect Figma in the same sheet, then Allow. Optional.
- **Flora**
  claude.ai › Settings › Connectors › Flora › Connect › Allow. Optional.
- **Krea**
  claude.ai › Settings › Connectors, or ask Claude Code “connect Krea”. Optional.

7 Ask

Select a layer and tell the Agent what you want. It animates it with the Motion DNA curves, presets and your brand.

```
Animate the selected title with Land
```

UPDATE

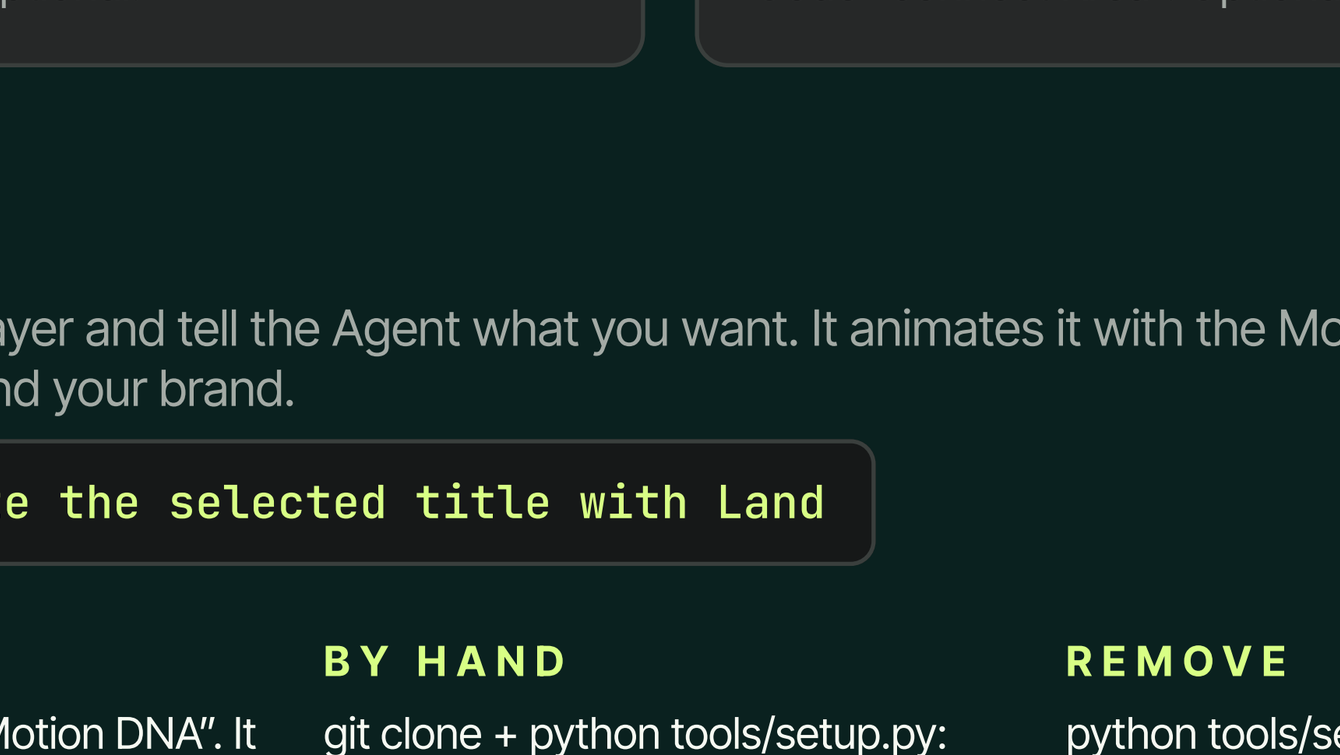

Ask Claude: “update Motion DNA”. It never touches your local changes.

BY HAND

git clone + python tools/setup.py: docs/quick-install/MANUAL.md

REMOVE

python tools/setup.py --uninstall. Your folder stays.
